

NORTH AMERICAN MARINE INDUSTRIES, INC.

# NAMI Dock Difference

**Customized** with in-house design and advanced engineering team.

**Encapsulated Flotation** used in seamless rotationally-molded shell polyethylene with UV inhibitors.

**Decking selections** include: composite, concrete, honeycomb, ice chip or aggregate, hardwoods and ACQ treated lumber.

**Roofing Systems** designed and engineered to fit your requirements. Roof columns spaced 8' apart. Options include: metal gauge selections, matching gable trim and ridge caps, and a variety of color selections.

**Stellar Customer Service** NAMI takes great pride in providing quality customer service. We are glad to help you with your dock project and that includes assistance with the Corps paperwork too.

**Structure** is designed and built strength with a 12" steel frame. We run fingers through the head pier, creating a pre-engineered "H" where members meet, significantly increasing the overall strength of the dock. Connections - All sections have 3" x 3" x 3/16" angle at pre-engineered connection points, and connections are made with 1/2" grade 8 bolts.

**Warranty** five years for manufactured parts, and twelve years for floats.

**Welding** is done in our shop according to a strict schedule. All sub-structure is fabricated and welded to create the best overall structure for your project. After inspection, each section is hot dipped galvanized before assembly.
